

Eread Doubl

The Eread Doubl is a Stereo Splitter.

4 X 1 x Stereo to 2 x Mono or
4 X 2 Mono to 1 x Stereo

It was designed to be used with the New Akai© MPCs.

The MPCs have 4 Stereo jacks cv output, with this module you can patch the 4 stereo cables in the stereo inputs, and the module will split the mono outputs.

In the MPCs they're labeled as 1/5, 2/6, 3/7, 4/8.

The first splitter will output cv channels 1 and 5, and so on.

So when you're playing out you can left patched the splitted cv jacks, and you only have to repatch the stereo jacks.

You can also use it as a Stereo maker, if you input 2 mono signals, they will be available in a stereo form at the stereo jack.

- 6HP, Passive, no power needed.
- Stupid Breton name
