

## Eread Jedoniañ

The Eread Doubl is a Strereo Splitter.

**4 X** 1 x Strereo to 2 x Mono or

**4 X** 2 Mono to 1 x Stereo

**1X** V/oct to Hz/V converter (cv 4)

**1X** V-Trig to S-Trig converter (cv 8)

Cv4 and Cv8 as designed to convert V/Oct and V-Trig to Hz/V and S-Trig, so you can pilot your Korg© Synths (MS10, MS20...)

They are jumpers on the back of the module, so you can choose to also use it like the other splitters.

It was designed to be used with the New Akai© MPCs.

The MPCs have 4 Strereo jacks cv output, with this module you can patch the 4 stereo cables in the stereo inputs, and the module will split the mono outputs.

In the MPCs they're labeled as 1/5, 2/6, 3/7, 4/8.

The first splitter will output cv channels 1 and 5, and so on.

So when you're playing out you can left patched the splitted cv jacks, and you only have to repatch the stereo jacks.

You can also use it as a Stereo maker, if you input 2 mono signals, they will be available in a stereo form at the stereo jack.

- 6HP / -12V : 10mA, +12V : 10mA
- Stupid Breton name
